#### **E. H. Wachs at HRSG User's Group**

E. H. Wachs will be exhibiting at the [HRSG User's Group](#) (Heat-Recovery Steam Generators) conference in Orlando, FL at the Caribe Royale Hotel March 9-11, 2015. Heat recovery steam generators utilize gas and steam turbines to create more power from the same fuel than a simple-plant cycle. The excess heat from the gas turbine is directed to the nearby steam turbine, which produces additional electricity, also known as a [combined-cycle power plant](#).

Machines displayed will include [power generation industry maintenance and repair equipment](#) for industrial pipes and valves. The Wachs equipment line up at the event will include tools used in [pipe cutting and beveling](#), [flange facing](#), and [portable valve operators](#). Visit John Gruntfest in booth # 112.

Follow E. H. Wachs on [LinkedIn](#) and subscribe to [YouTube](#). For more information, visit [www.ehwachs.com/Industrial-Products/](http://www.ehwachs.com/Industrial-Products/).
